Product

SMART Curtains

Product Description

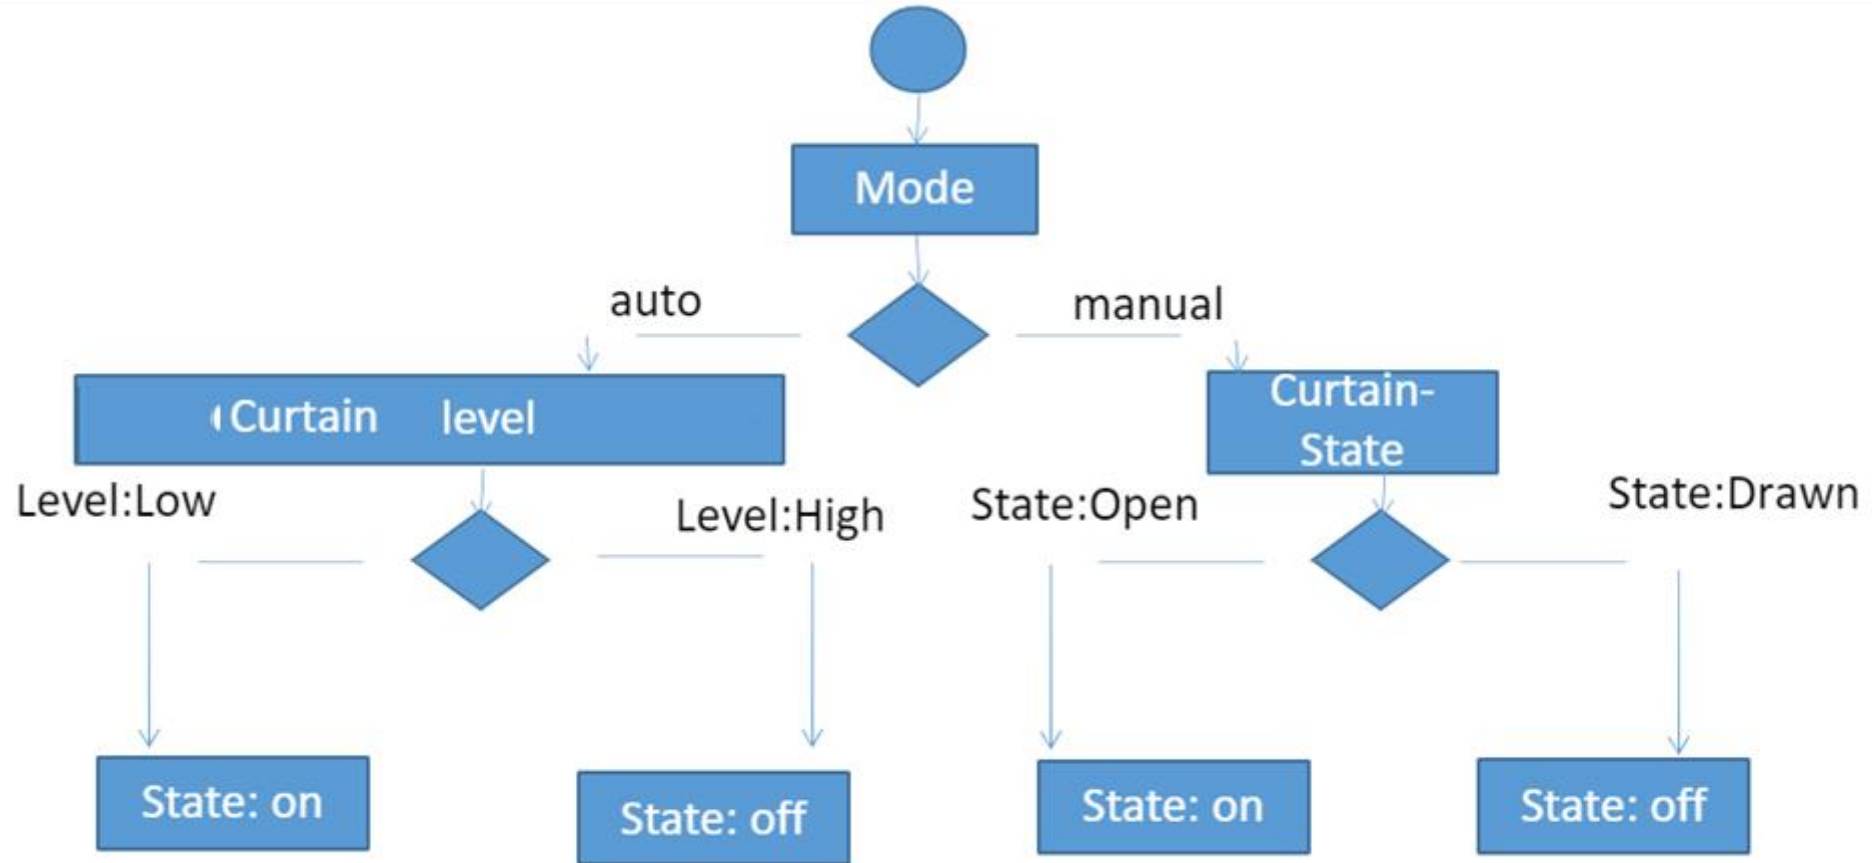

Smart Curtains

- Eliminating the need for human intervention for operating curtains. According to user activity it slowly opens and closes at night. Can be connected via app and light sensor. Users can then control and schedule their curtains to open and close with an app on their phone or by voice control – the system supports Google, Alexa, Siri and IFTTT with the SwitchBot Hub. A built-in light sensor allows the curtains to open automatically when the sun rises.

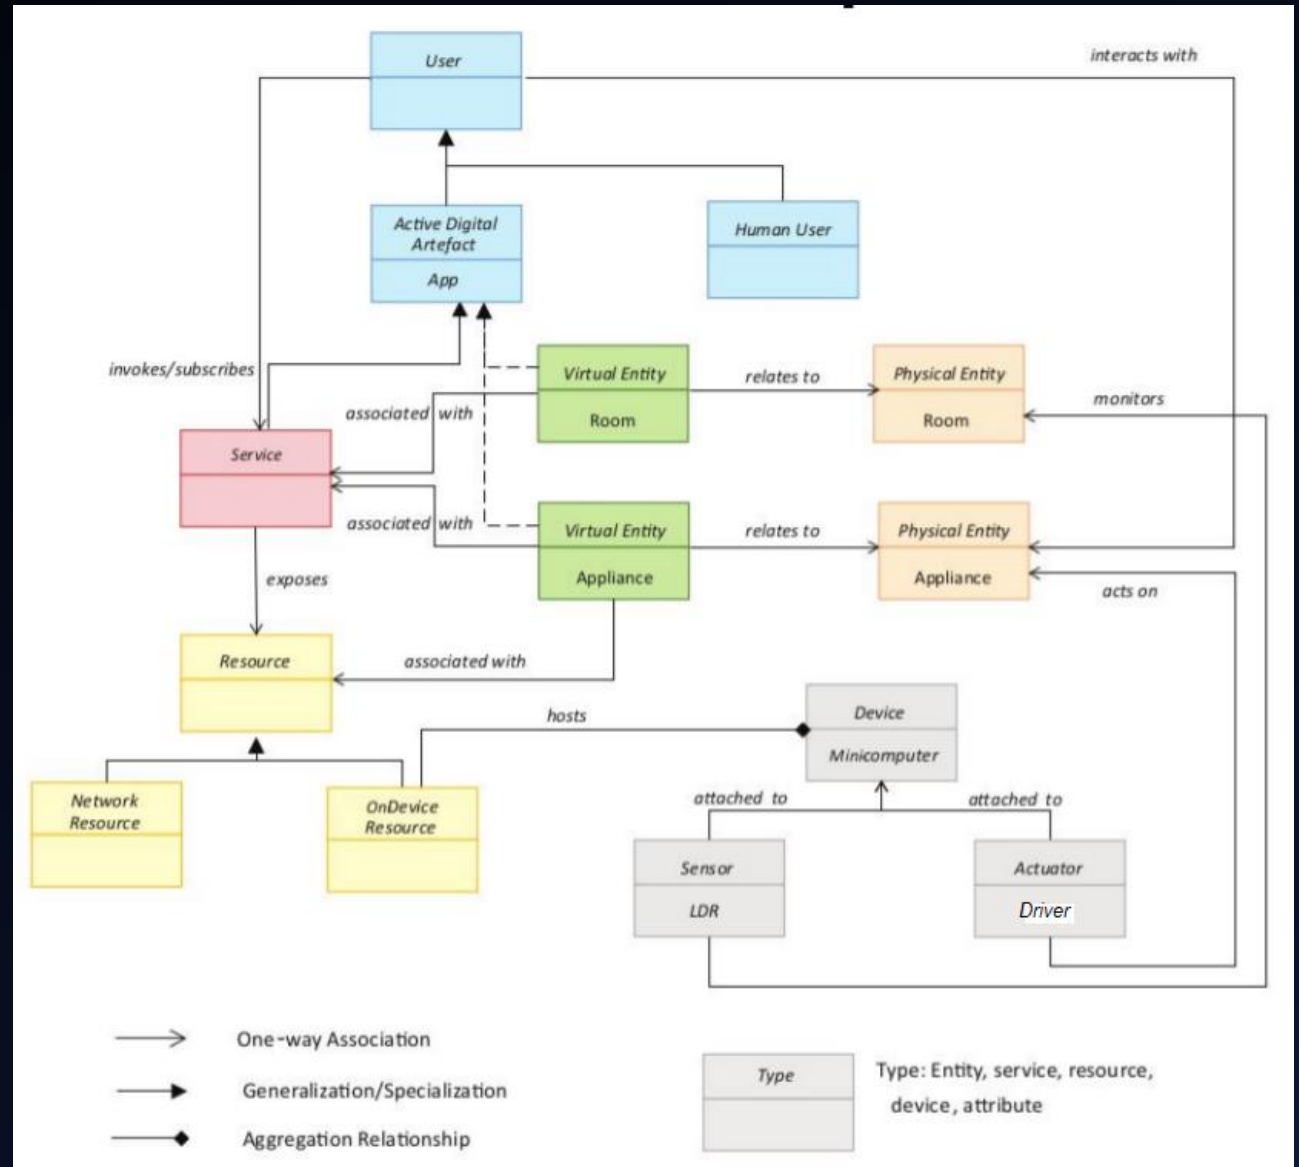

Purpose & Requirement Specification

- Purpose: To eliminate the need for human intervention for operating curtains. According to user activity it slowly opens and closes at night. Can be connected via app and light sensor. Users can then control and schedule their curtains to open and close with an app on their phone or by voice control.
- Behavior: Has both manual mode to move curtains and auto mode which moves curtains at specified times.
- System Management Requirement: Interaction through app installed on user phone, voice control or remote controller.
- Data Analysis Requirement: Timing of alarm on phone and phone switch off at night. Studies user activity through app usage, analyzes voice commands and usage patterns. The machine locally analyzes timing data, but the machine learning is on Cloud.
- Application Deployment Requirement: It can be mounted to the rod or the rail of a curtain and connected via app and light sensor. Can be accessed remotely using the app.
- Security Requirement: User authentication on app, password login and fingerprint lock after long period of inactivity.
